Solution 1

Rate this:      

you can use something like this...

[Collapse](#) | [Copy Code](#)

```
function validateEmail(emailField){
    var reg = /^[a-z0-9_\-\.\.]+@[a-z0-9-]+\(\.[a-z0-9-]+\)*(\.[a-z]{2,3})$/;

    if (reg.test(emailField.value) == false)
    {
        alert('Invalid Email Address');
        return false;
    }

    return true;
}
```

if you need to omit the capital letters then just remove **A-Z** from your expression, and you need to allow both the letters capital as well as lower then use some thing like this, **A-Za-z** like above expression is modified to allow only lower letters, if we need to allow only capital then the expression is something like this...

Only Capital

[Collapse](#) | [Copy Code](#)

```
^[A-Z0-9_\-\.\.]+@[A-Z0-9-]+\(\.[A-Z0-9-]+\)*(\.[A-Z]{2,3})$
```

Both

[Collapse](#) | [Copy Code](#)

```
^[A-Za-z0-9_\-\.\.]+@[A-Za-z0-9-]+\(\.[A-Za-z0-9-]+\)*(\.[A-Za-z]{2,3})$
```

Thanks,

Member 10684630 at 21-Mar-14 7:19am

actually i have tried dis but it didnt work..

Tejas Vaishnav at 21-Mar-14 8:32am

I have tried to validate email like Axy@sbc.com and its not valid according to regex, because A is in capital and when i tried axy@sbc.com its validate.. so what you have tried to check, can you give me an example where you got issue, can you share that email id which is not validate using this regex..

Add your solution here

B / U ~~S~~ small **BIG** code **var** < > & link [^]
encode untab indent outdent
