How to Use Google Transliteration API In Regional Language Blogger Blogs

January 24, 2011 by Harish in Blogger Comments, Blogger Tricks, Blogger Widgets

What is Transliteration ?

Transliteration is the process of phonetically converting a word written in one script into another. Transliteration should not be confused with translation, which involves a change in language while preserving meaning. With transliteration, it is the sound of the words that are converted from one alphabet to the other.

The majority of blogs are in English.Though there are many regional languages spoken but there are a few blogs published in regional languages. The main reason being the unavailability of editors for regional languages.

Blogger Platform is available in almost all Languages. But is not available to Write or Commenting in regional language for visiters.

This plugin offers language transliteration for visitors to **Comment** or to **Write** in regional language

The Transliteration API currently supports transliteration from the English version to the scripts of the following languages:

Amharic, Arabic, Bengali, Greek, Gujarati, Hindi, Kannada, Malayalam, Marathi, Nepali, Persian, Punjabi, Russian, Sanskrit, Serbian, Tamil, Telugu, Tigrinya and **Urdu.**

Here is an Example of Textarea to Write Hindi

Type in Hindi (Press Ctrl+g to toggle between English and Hindi)

How to Add this Transliteration Text Box to Blogger?

There are two steps
a.Adding Script Code
b.Adding Html Code

Adding Script Code

Go to **Blogger Dashboard** > **Design** > **Edit HTML**

Tick on **Expand Widgets** Check box

Find `</head>` tag and place Bellow Code before It!

```html
<script src="https://www.google.com/jsapi" type="text/javascript">
</script>
<script type="text/javascript">
    google.load("elements", "1", {
        packages: "transliteration"
    });

    function onLoad() {
        var options = {
            sourceLanguage: google.elements.transliteration.LanguageCode
            destinationLanguage: [google.elements.transliteration.Langua
            shortcutKey: 'ctrl+g',
            transliterationEnabled: true
        };

        var control = new google.elements.transliteration.Transliteratio
        control.makeTransliteratable(['transliterateTextarea']);
    }
```

Change Destination language code '**HINDI**' with yours and it must be in Block Letters
Available Languages :-

Adding HTML Code

This is a **HTML** code, and you can add this that where it you want (*i.e* in **Sidebar**, in **Contact Form**, Or in above **Comment Form** *etc,.*)

```
<div class="Google-transliterate-Way2blogging">
    Type in Hindi (Press Ctrl+g to toggle between English and Hindi)<br>
    <textarea id="transliterateTextarea" style="width:600px;height:200p>
<span style="font-weight:bold;font-size:10px;float:right;margin:5px;"><a
</div>
```

How to add this Text Box Above Blogger Comment Form?

1. Search bellow two tags

```
<b:if cond='data:post.embedCommentForm'>
<b:include data='post' name='comment-form'/>
```

2. In between these two tags Put above HTML Code that i am given.

Thats all!

can i use it in htm if yes then how

Harish
July 22, 2012 at 12:45 am

yes you can! the first two steps only for html. place the both scripts in html file.
that's it!

Given JavaScript is wrong … 🙁

Harish
August 27, 2012 at 7:47 am

you are wrong!!

Vinay Prajapati
August 27, 2012 at 7:43 pm

Nops! I am right. I know you're saying so because your given code is as per developer code.

but it's not working in google sidebar and in comment arean in new blogger template like simple etc.

but try this what I am saying… 😃

1. destinationLanguage:
2. [google.elements.transliteration.LanguageCode.HINDI], <– Remove '[' & ']' both; only square brackets
3. shortcutKey: 'ctrl+g',
4. transliterationEnabled: true
5. };
6. }; <– Remove this

Harish
August 28, 2012 at 9:46 am

Thank you, fixed the error.

Vinay Prajapati
